Skills

DevOps/Platform: GitOps, AWS, Terraform, Kubernetes, Helm, Flux, CDK, IDP, GitHub Actions, Bash, Python, Loki

Engineering: Rails, Python, Go, Postgres, GraphQL, Performance Scaling, APIs

Experience

Senior DevOps Engineer, Patriot Software – Canton, OH

May 2024 – Nov 2025

- Migrated manually maintained core Kubernetes components to GitOps management via Flux, decreasing upgrade times and ensuring a consistent config applied across 3+ Kubernetes clusters.
- Built real-time PostgreSQL-to-Snowflake replication using Snowflake Openflow across 50+ databases, replacing nightly batch ETL and reducing analytics data latency from hours or days to minutes for multiple teams.
- Instrumented multiple Kubernetes clusters with Prometheus monitoring stacks, Alertmanager alerts, and wired them into our incident response system for timely action via on-call for any production incidents.
- Supported ongoing efforts to comply with our SOC 2 policies and procedures.

Senior DevOps Engineer, Papa Inc – Miami, FL

Nov 2020 – Feb 2023

- Replaced a manual, error-prone deployment process with a custom Internal Developer Platform, powered by GitHub's Deployments API, Slack, and Helm on top of AWS EKS, going from once-a-month manual deployments to 30+ times a day via automated deployments.
- Created a system that deployed isolated, per-branch/PR testing "review apps" on AWS EKS for engineering and QA to validate changes before deploying to production, reducing production incidents by 80%.
- Developed a system to produce scrubbed production data for use in QA and testing environments, providing confidence by using "production shaped" data, without exposing any PII or sensitive data.

Senior Software Engineer, StackShare – San Francisco, CA

Aug 2016 – Oct 2020

- Wrote backend APIs in REST and GraphQL for production features.
- Addressed scaling issues during times of high growth.
- Managed consultants and worked closely with product teams and frontend engineers to ensure product roadmap features worked as intended.

Senior Software Engineer, GitLab Inc – San Francisco, CA

Jan 2016 – Aug 2016

- Assisted with backend performance and PostgreSQL scaling issues during hypergrowth stages.
- Contributed to the Gogs open source project.
- Joined via acquisition of GitHub, a personal side project that deployed managed GitLab instances and CI runners.

Founder, GitHub – Brooklyn, NY

Dec 2014 – Dec 2015

- Founded and built GitHub, a platform for automated deployment, management, and upgrades of private self hosted GitLab instances in the cloud.
- Adopted by GitLab Inc. in 2015 and I later joined the GitLab team as a Senior Software Engineer.

Senior Software Engineer, HashiCorp – San Francisco, CA

Jul 2014 – Jan 2015

- Built out backend REST APIs for use in the "Atlas" cloud offering.

Senior Software Engineer, DigitalOcean – Brooklyn, NY

Aug 2013 – Jul 2014

- Automated a golden master image generation system, powering the "one click install" feature of several popular open source projects on DigitalOcean's cloud platform (WordPress, GitLab, MySQL, etc.)
- Designed and built REST APIs to power third-party integrations.
- Built the first-ever Android client for VM management.

Senior Software Engineer, Etsy – Brooklyn, NY

Nov 2011 – Aug 2013

- Served on the "Core" team as a performance specialist for a platform serving 95 million users.
- Refactored critical paths across the software stack to meet strict SLAs.
